

# GHB

**« monitored is protect yourself**

# **The questions we will ask ourselves :**

- **Why this drug is called the « rapist's drug » ?**
- **What is the GHB ?**
- **How do we get it to the victims ?**
- **What are the effects of this drug ?**
- **Where did this drug come from ?**
- **What is the price of this drug ?**

# **What is the GHB ?**

**GHB (gamma-hydroxyButyrique acid) also known as « liquid ecstasy », « rape drug » or « rapist » is in the form of a soluble white powder or colourless, odorless and tasteless liquid.**

# **Why this drug is called the « rapist's drug » ?**

**This drug is known as the « rapist's drug ». The discreet aspect of GHB makes it suitable for a criminal use, indeed, the liquid can be poured into a drink without altering its taste, smell or appearance. This is how some malicious people use it for dishonest or even perverse purposes (theft, sexual abuse, assault, etc). Moreover, the amnesia of GHB reinforces its dangerousness since the abused person does not always remember what happened to him.**

# **How do we get it to the victims ?**

**Indeed the most common method to consume GHB, is introduce it in liquid form in a glass of alcohol, because ot is in liquid state that GHB mixes most quickly and that it is the most odorless and colorless.**

# **What are the effects of this drug ?**

**GHB creates in humans :**

**Nausea, vomiting, mental confusion, headache, drowsiness, dizziness and dizziness respiratory distress, coma amnesia (especially when GHB is mixed with alcohol). Death ( following a drop in blood pressure, such as respiratory arrest or hypothermia).**

**GHB can also cause irritation of the esophagus and mouth due to the sodium hydroxide it contains . In the same way, it creates skin irritations when it comes into direct contact with the skin. The effects vary depending on the consumer, the consumption context, the quantity and quality of GHB. They last about 1 hour, only 15 to 30 minutes after absorption. The first effect is often that of a feeling of heat and intoxication comparable to that of alcohol.**

# **Where did this drug come from ?**

**GHB is a synthetic product that consists of two substances : Gamma-butyrolactone (GBL) and 1,4 butanediol (1,4- BD). GBL is used as a solvent in the paint industry. 1,4-BD is a colourless viscous liquid used in chemical industries to produce resins and polyester. When ingested, these substances are converted into GHB by the body .**

# **What is the price of this brug ?**

**Its price is between 10 and 20 euros per half  
litre, which makes it an accessible brug,  
sometimes cheaper than alcohol.**

# **OUR ADVICE :**

**In our opinion, we should really pay attention to his drink in the evening, especially when we are surrounded by strangers. Never let your glass drag anywhere.**

**The company should create special glasses in the evenings. These glasses would be inaccessible and impossible for anyone to open and put something inside.**

# **Our Slogan**

**Our slogan is « monitored is protect yourself »**

**This is to say that if everyone watches their  
brink in the evering, nothing will be introduced.**
